

Natural Farming Uttar Pradesh

Developed a natural farming model using GIS technology

Institutions in Uttar Pradesh providing various types of information—including universities, research centers, and KVKs—focused on natural farming.

Prepared by:-Remote Sensing Agriculture Knowledge Help Integral Society (Jhansi)

I have developed a natural farming model using GIS technology that allows for the monitoring and change detection of a farm—including details like the *Khasra* number (plot number), cluster number, and other farm-specific data—via satellite imagery accessible through a single link; this enables the assessment of land-use changes and the evaluation of the benefits or impacts of natural farming on the soil.
